CORPORATE ENGAGEMENT

2020

LOVESTEMSD.ORG
The San Diego Festival of Science and Engineering Week is the largest event of its kind in Southern California. It’s a collective effort between industry, business leaders, government, community organizations, public outreach centers, academia, schools and school districts, and parents. The Festival began 11 years ago primarily science and engineering-focused, with a goal to provide experiential activities in these fields to diverse populations. The overwhelming success of the formative years of the Festival proved to be a catalyst for what the Festival would swiftly evolve into – a comprehensive San Diego County community event that celebrates the diverse cultures, communities and populace of San Diego, and works to inspire the curious young minds of our region to become tomorrow’s San Diego STEM leaders. The Biocom Institute strives to ensure the San Diego Festival of Science and Engineering Week is ever-evolving and continually responding and meeting the desires and needs of the community.
Festival Week provides the platform for community & industry leaders to unite as one, highlights the opportunities in the growing field of STEM, and provides the platform for all students to experience their own potential and be the next STEM innovators.

**Widen access to STEM for underserved communities and help provide diverse STEM role models for our youth.**

84% of science & engineering jobs in the U.S. are currently held by white or Asian males.

**Help provide access to STEM learning opportunities and programs that allow youth to see STEM disciplines as springboards for their careers.**

At all levels of educational attainment, STEM job holders earn 11% higher wages compared to their same-degree counterparts in other jobs.

**Help inspire STEM career interest early.**

In California, where STEM clusters are among the fastest growing in the world, it is vital that students engage in STEM fields in order to meet workforce demands.

**4 out of 5** college STEM majors made the decision to study STEM in high school or earlier.

Data shows that most college students make the decision to study STEM in high school or earlier, so it is imperative for us to capture the attentions of our youth during the early stages of education.

**Employment in STEM-related fields will increase by 1 million during the next decade.**

**58%** of job openings require basic STEM literacy, and 42% require advanced STEM skills.

**60%** of U.S. employers say they have difficulty finding qualified workers to fill vacancies at their companies.

**28%** of CEOs say that at least half of their new entry-level hires lack basic STEM literacy.

“The Festival provides a hub for the community around STEAM disciplines –
a driving force for our economy, our innovation ecosystem, and the industries that
color San Diego’s culture. As part of the innovation economy in San Diego, STEM
companies need to engage with and inspire the next generation. We all play a role
in building San Diego’s future.”

--Karen Possemato, Vice President, Corporate Marketing & Communications, Illumina
