
High Tech High wins Bright Ideas Society award

The San Diego Festival of Science & Engineering recently announced the winners of the Bright Ideas Society award. The award is presented to one outstanding science and engineering club at the elementary, middle and high school level for their illuminating science, technology, engineering, and math (STEM) ideas.

In the high school level, High Tech High International in Point Loma earned an award for Cyanotyping. If you don't

know what it is, you will after visiting the High Tech High International Expo booth at Petco Park on March 21.

Visitors will create their own cyanotype picture to take home by mixing emulsions from raw chemicals and placing various objects and photos on photosensitive paper. The projects will then be exposed to sunlight, creating individual unique works of art. This exhibit will teach attendees how light intersects with matter.
